

## FORMER 3 AXIS WITH AGV

This new former brings an improvement in term of flexibility and ergonomy without disregarding performances and modularity.

It has been designed to form from cartons up to cases of 1,200 mm flat at a speed reaching 3,000 cases/hour.

Moreover it becomes an equipment easy to use with size changeovers fully automatized and an ergonomic blanks loading, automatic in its AGV version.

No need of staff anymore to feed the machine with cardboard and format change. The AGV assures these operations in connection with the former and the line requirements.

This former with AGV is an additional equipment to the existing range of robotized loading systems TECMA ARIES with the aim of facilitating the daily operation of ends of packaging lines.
